# **Actively anticipating the unintended consequences on air quality of future public policies (ANTICIPATE)**

## **Background**

Poor air quality is considered by the UK Government to be “the largest environmental risk to public health in the UK”. As well as human health, air pollution also has wider implications for the natural environment and for the economy. The Clean Air Strategy, published in March 2019, outlines ambitions for tackling this public health challenge by reducing UK air pollution, improving the environment and achieving economic growth.

In recognition of the multiple interrelated sectors and transboundary relationships, Clean Air goals are explicitly aligned for co-delivery with three core Government strategies: UK Industrial Strategy, Clean Growth Strategy, and the 25-Year Environment Plan. ANTICIPATE will enable an in-depth and systems based analysis of four policies selected from these headline Government Strategies, as well as a key health strategy, the NHS Long Term Plan, therefore contributing to more robust and resilient policy making through improved situational awareness of the unintended consequences of policies, outwith the area of intended impact.

## **Strategy Review**

To facilitate this process, we have undertaken a comprehensive review of these four strategic documents to identify key policy characteristics, scope and relationships with sources and impacts of air pollution. The initial stage of this process, was a systematic extraction of statements from each document chapter, classified as long-term aims (strategies), objectives for strategy delivery (goals), intended delivery mechanism or course of action (policies) and spending pledges (funding commitments). We proceeded to classify all statements with regard to policy area and potential for impacts upon UK air quality (low/medium/high). This final report provides a comprehensive reference resource for four core national strategies of relevance to a range of stakeholders (e.g. national/local Government, academia, civic sector organisations).
